

BOOKINGS / CONVERSATIONAL AI

AnyBook

A conversation. A confirmed booking.

Customers book through chat or voice. Your availability, prices and business rules drive the answer, while your team sees the result.

IN PRODUCTION

Used for fishing-lake reservations. Configurable for other booking and appointment businesses.

01 Set up the business through conversation

Describe services, schedules, prices and staff. AI helps configure the booking application, while the server validates changes.

02 Take bookings wherever customers arrive

The assistant checks availability and completes bookings through web chat, the app or a phone conversation. SMS and email support confirmations.

03 Let the booking engine verify the details

The engine checks the slot, price and business rules before confirmation. Shared booking data and layered checks protect against overbooking.

HOW IT WORKS**01 Customer asks****02 AI understands****03 Engine checks****04 Booking confirmed**

What could your customers book?

See conversational setup and booking in action. Discuss your use case, integrations or a partnership.
